Notes

MITIGATIONS / WARNINGS / REMEDIES / NOTES

work on code in an effort to stay on track, try to improve code and debug as much as possible

if the code is unsalvageable then start again, a way to mitigate this is to upload it on github so that you can always have it backed up
seek help from qa as this project is important

again, upload progress every 3 hours over to github in order to make sure you dont lose current progress in the event of a computer failure
use back up laptop (my younger brothers computer) in an effort to continue working on the project
